

THE FIRST LINE OF TREATMENT OF APD

Usage and dosage of tablets to be prescribed under professional supervision.

Behavior –

- Fast onset of action
- Effective in healing & preventing NSAID related ulcers
- Highly effective, well tolerated treatment for acute benign Gastric Ulcer
- Exhibits no drug interaction co-administered drugs unlike Omeprazole and Lansoprazole

Treatment of Clopidogrel with a proton-pump inhibitor can reduce the efficacy of clopidogrel but...
Peptium 40 (Pantoprazole) does not decrease the antiplatelet effect of Clopidogrel unlike PPI.

Indication –

- Acid peptic disorders
- Erosive esophagitis
- Duodenal ulcer
- ZES
- Gastric ulcer
